Job description: UI Engineering/Product Integration Lead
Location: US, UK, Europe - fully remote

Anchore Enterprise is an on-premises (on-prem) web application designed for assessing and reporting vulnerabilities and policy-based findings in containerized deployments. While it can be hosted on the web, operational responsibility rests with the end user. Our customers typically host the product internally on platforms such as AWS EKS and ECS, along with other cloud platforms. Anchore facilitates cloud-based usage by providing Helm charts and other essential infrastructure.

Anchore Enterprise is a sophisticated distributed system application that scales significantly for our major Fortune 500 and public sector customers, conducting thousands of vulnerability scans daily. Note that the product is not a SaaS offering.

What You Can Expect To Be Doing:

- Developing, supporting, and executing a vision for the Anchore Enterprise UI, collaborating closely with the UI manager, VP of product, other product leaders, VP of engineering, and other relevant stakeholders.
- Acting as a strategic leader for multi-year UI roadmap execution, working with project managers to deliver the roadmap.
- Collaborating with the UI Design Lead on the product vision.
- Leveraging leadership skills and cross-functional experience effectively.
- Collaborating closely with the UI manager to address UI implementation needs.
- Working with and supporting cross-functional teams beyond UI to ensure the product has a strong UI interface and seamless backend integration.
